Introduction

Background

“New Data Elements for Mental Health QUERI” is a project for developing and distributing national clinical reminders for depression screening, appropriate clinical follow-up to a positive depression screen, and the evaluation of abnormal involuntary movement disorders for patients with schizophrenia on antipsychotic medications. The project also includes compliance reporting and rollup functionality for these reminders, which will be included in Version 2 of Clinical Reminders.

The Quality Enhancement Research Initiative (QUERI) is a program within the VA Health Services Research and Development Service (HSR&D). QUERI’s mission is to translate research innovations into improved quality of health care for veterans. The goal of the VA MH-QUERI group is to lessen the gap between clinical guideline recommended therapies and actual VA practice and to improve the process of evaluating health care delivery for patients receiving treatment in VA medical centers and outpatient clinics.

The goal of the first phase of this project is to distribute three clinical reminders to all VA medical centers nationally:

1. Depression screening
2. Appropriate clinical follow-up to a positive depression screen
3. Evaluation of abnormal involuntary movement disorders for patients with schizophrenia on antipsychotic medications

These three reminders are based on VHA clinical practice guidelines for the assessment and treatment of Major Mood Disorder (MDD) and psychoses. The Mental Health QUERI (MHQ) Workgroup worked with System Design & Development (SD&D) staff to define the reminders and to educate end users.

As part of this project, a national data repository at the Austin Automation Center will be developed to house guideline compliance data linked to the MH clinical reminders. This database will provide facility-level quarterly summary reports for selected MH performance measures.

The compliance reporting and rollup functionality for these reminders will be included in Version 2 of the Clinical Reminders package, which will be distributed in 2003. Version 2 will contain new evaluation tools, along with rewritten indexing functionality that will provide faster reminder processing and improved reporting.

Impact on Sites

- **Installation of build**

Three Mental Health clinical reminders and dialogs are distributed in this patch, PXR*1.5*15. The patch installation takes advantage of the reminder exchange utility and installs the reminders into the host system “silently.”

- **Setup and implementation by local team**

The following steps are required after the reminders have been installed on the system.

1. **Map Terms:** As with all National Reminders, the Mental Health reminders are built with reminder terms instead of individual health factors or other finding types. This allows a site to continue to use findings that already exist on the host system as data elements and to relate these local findings to the national terms. The individual health factors that match the reminder term are also distributed with the patch, so that a site that does not have a local finding can use the nationally distributed health factors to collect data.

NOTE: Data rollout for this project will be based on how you map your local findings to the national terms.

2. **Edit the reminder dialogs**

After you have mapped the local findings to the national terms, you can continue to use your local findings as the data elements that are captured or use the national findings that are already mapped to the national terms.

To use your local findings, edit the reminder dialogs by first identifying the elements that allow that data element to be collected, and then changing the finding item for that element to the local finding. Directions are provided later in this manual.

NOTE: The only way national reminders and dialogs can be modified is by changing the finding items in the nationally distributed elements to use your local finding items instead of the nationally distributed ones.

NOTE: Do not autogenerate dialogs for these reminders, as the dialogs are included in the packed reminders. You only need to activate/link the dialogs.

Impact on Clinicians

- Use of VA-DEPRESSION Reminders (or local equivalent) on cover sheet
- Resolution of reminders through CPRS point-and-click Reminder Resolution tools

Reminder	Intended Audience
Depression Screening	Primary Care Clinicians
Depression Assessment-Follow-up	Primary Care Clinicians
AIMS	Mental Health Clinicians

Pre-Installation

Clinical Reminders patch PXRMP15I adds three new reminders, dialogs, taxonomies, reminder terms, and health factors to support the MHQ project.

Required Software

Package/Patch	Namespace	Version	Comments
Clinical Reminders	PXRM	1.5	Fully patched (PXRMP15I)
HL7	HL	1.6	Fully patched
Kernel	XU	8.0	Fully patched
MailMan	XM	7.1	Fully patched
VA FileMan	DI	22	Fully patched

Files installed

811.8 REMINDER EXCHANGE FILE

Adds entries to Reminder Definition, Health Factors, Reminder Taxonomy, Reminder Sponsor, and Reminder Dialog files.

Routines Installed

PXRMP15I
PXRMPXU4
PXRMDLR

PXRMP15I has both the pre and post-install calls:

PRE-INIT ROUTINE : PRE^PXRMP15I
POST-INIT ROUTINE : POST^PXRMP15I

Estimated Installation Time

Installation	About 3 minutes
Setup after installation by the Reminder Manager or CAC to address local implementation	Approximately two-four hours (depending partly on the experience level of the manager or CAC)

Installation

This build can be loaded with users on the system. Updating of cross-references for the new data added to the files will occur during the install.

The install needs to be done by a person with DUZ(0) set to "@."

1. Retrieve the PXRM*1.5*15 build

Use FTP to access the build, PXRM_1_5_15.KID, from one of the following locations:

Albany	ftp.fo-albany.med.va.gov	<ftp://ftp.fo-albany.med.va.gov>
Hines	ftp.fo-hines.med.va.gov	<ftp://ftp.fo-hines.med.va.gov>
Salt Lake City	ftp.fo-slc.med.va.gov	<ftp://ftp.fo-slc.med.va.gov>

2. Install the build first in a training or test account.

Installing in a non-production environment will give you time to get familiar with new functionality and complete the setup for reminders and dialogs prior to installing the software in production.

3. Load the distribution.

In programmer mode, do ^XUP, select the Kernel Installation & Distribution System menu (XPD MAIN), then the Installation option, then the option LOAD a Distribution. Enter your directory name and PXRM_1_5_15.KID at the Host File prompt.

Example

```
Select Installation Option: LOAD a Distribution

Enter a Host File: PXRM_1_5_15.KID

KIDS Distribution saved on Jan 17, 2003@11:59:16
Comment: Mental Health Reminders

This Distribution contains Transport Globals for the following Package(s):
Build PXRM*1.5*15 has been loaded before, here is when:
    PXRM*1.5*15    Install Completed
                   was loaded on Jan 17, 2003@10:09:37
    PXRM*1.5*15    Install Completed
                   was loaded on Jan 17, 2003@10:45:21
OK to continue with Load? NO// YES

Distribution OK!

Want to Continue with Load? YES// <Enter>
Loading Distribution...

    PXRM*1.5*15
Use INSTALL NAME: PXRM*1.5*15 to install this Distribution.
```

From the Installation menu, you may elect to use the following options:

a. Backup a Transport Global

This option will create a backup message of any routines exported with the patch. It will NOT back up any other changes such as DDs or templates.

b. Compare Transport Global to Current System

This option will allow you to view all changes that will be made when the patch is installed. It compares all components of the patch (routines, DDs, templates, etc.).

c. Verify Checksums in Transport Global

This option will allow you to ensure the integrity of the routines that are in the transport global. If there are any discrepancies, do not run the Install Package(s) option. Instead, run the Unload a Distribution option to remove the Transport Global from your system. Retrieve the file again from the anonymous directory (in case there was corruption in FTPing) and Load the Distribution again. If the problem still exists, log a NOIS and/or call the national Help Desk (1-888-596-HELP) to report the problem.

d. Print Transport Global

This option will allow you to view the components of the KIDS build.

4. Unmap any mapped PXR* routines.

5. Install the package.

From the Installation menu on the Kernel Installation and Distribution System (KIDS) menu, run the option Install Package(s). Select the package PXR*1.5*15 and proceed with the install. If you have problems with the installation, log a NOIS and/or call the National Help Desk to report the problem.

```

8. Map PXRM routines, if unmapped in a pre-installation step.

9. Post-installation routine

The post-install routine, PXRM*15I, installs the three MHQ “packed” reminders into your Reminder Exchange File, #811.8.

After the installation has finished, if you discover that the reminders weren’t installed correctly for some reason, you can use the Exchange options on the Reminders Manager Menu to install the “packed” reminders.

NOTE: Two revised dialog result elements are distributed with PXRM*1.5*15:

PXRM AUDC RESULT ELEMENT 1
PXRM AUDC RESULT ELEMENT 2.

These new elements contain the condition statement that will evaluate the AUDC score returned from the Mental Health package against a patient sex.

The current Result Elements don’t take Sex into account when returning the result text for the progress note. The replaced elements (same names) do look at Sex when evaluating the result text.

Setup and Maintenance

After installing Patch 15, follow the steps below to implement your depression reminders and dialogs for this project. Setup may require as much as two hours, depending on your experience with reminders, whether you're an integrated or single site, and how much you modify the reminders for local use. Gathering relevant information, such as lists of Mental Health tests and quick orders that will be mapped, will facilitate implementation.

As with all national reminders, the depression reminders are built with reminder terms instead of individual health factors or other finding types. This allows sites to continue to use findings that already exist on the host system as data elements and to relate these local findings to the national terms. The individual health factors that match the reminder term are also distributed with the patch, so that a site that doesn't have a local finding can use the nationally distributed health factors to collect data.

A detailed description of each reminder's terms is included in the reminder description and also in Appendix C of this manual.

The AIMS reminder was designed to be due on all patients who are on any one of the antipsychotics (excluding ones like compazine). The taxonomy for schizophrenia is included in the reminder, but will not be part of the cohort logic. By leaving the taxonomy in the reminder, the reports that can be run using the Report Extracts included in Clinical Reminders Version 2 will allow data roll-up to occur either with or without information on patients with schizophrenia.

Instructions are provided about how to copy this reminder and modify the copy to allow a site to create a second reminder for reporting of patients with schizophrenia who are on an antipsychotic (reporting numbers that match the performance measure).

Sites should ensure that the AIMS reminder does not appear for clinicians who are not responsible for the management of antipsychotic-medication side effects. This can be accomplished by using the CPRS cover sheet parameters to display the reminder only to those users who evaluate the patients for side effects of antipsychotics.

If your site uses a computed finding to link reminders to progress note titles (that is, the condition in the Computed finding is set to look for a specific note title), you can copy the AIMS reminder and add this. For example, the note title "AIMS TEST" can be used to satisfy the reminder for AIMS Exams.

Setup Steps

1. Verify correct installation of the reminders definitions, terms, and dialogs.

- a. Using *Inquire about Reminder Definition* on the Reminder Definition Management menu on the Reminder Management Menu, ensure that the Major Depressive Disorder and AIMS reminder definitions have been installed. Review the reminders. (Reviewing the definitions will help you understand how they use reminder terms.) *Do not make any changes to these reminders.* If necessary for local usage, you may copy the national reminder and create a local reminder; then make any desired changes to the local copy.

VA-ANTIPSYCHOTIC MED SIDE EFF EVAL
VA-DEPRESSION SCREENING
VA-POS DEPRESSION SCREEN FOLLOWUP

```
Select Reminder Managers Menu Option: RM Reminder Definition Management
RL      List Reminder Definitions
RI      Inquire about Reminder Definition
RE      Add/Edit Reminder Definition

```

NOTE: Do not autogenerate dialogs for the reminders. Dialogs are included with the packed reminder installation.

2. Map local findings to the national Reminder Terms.

Option: Reminder Term Management on the Reminder Management Menu.

Before using depression reminders, map the local findings your site uses to represent the national reminder terms, if necessary.

- Prepare a list of your local findings – health factors, taxonomies, etc. that you use to represent depression terms.
- Review the national term definitions (see Appendix C or use the options on the Reminder Term Management menu), to compare these to what you are using locally to represent depression terms.

Purpose of National Terms

- ◆ Terms are used to define a general concept that can be used on a national level
- ◆ Terms allow sites the ability to link existing local or VISN findings to the national term.
- ◆ Data rollup for the second phase of this project will be based on how you map your local findings to the national terms.

VA-DEPRESSION SCREENING Reminder Terms

Sites that use a different screening tool than the 2-question MacArthur screening tool will need to create local health factors to indicate a positive or negative result and will need to map those local health factors to the national terms:

DEPRESSION SCREEN NEGATIVE
DEPRESSION SCREEN POSITIVE

Reminder terms are included in this reminder to indicate if patients cannot be screened due to an acute or chronic medical condition.

ACUTE MEDICAL CONDITION
CHRONIC MEDICAL CONDITION

The health factors for these terms are:

UNABLE TO SCREEN-ACUTE MED CONDITION (resolves the reminder for 3M)
UNABLE TO SCREEN-CHRONIC MED CONDITION (resolves the reminder for 1Y).

The reminder term DEPRESSION SCREEN DONE RESULT UNKNOWN is included for sites where a health factor or exam is being collected to indicate that depression screening is being done using an appropriate tool, but the result (positive or negative) is not being recorded. This term is included ONLY to allow sites to make the conversion to collecting positive and negative screens—any health factors or exams that a site maps to this term should NOT be included for use on any dialog or on an encounter form and should not be used in the future.

VA-POS DEPRESSION SCREEN FOLLOWUP Terms

The following reminder terms are included in this reminder.

ANTIDEPRESSANT MEDICATIONS
DEPRESSION DIAGNOSIS
DEPRESSION ASSESS COMPLETED IN MHC
DEPRESSION ASSESS INCONCLUSIVE (? MDD)
DEPRESSION ASSESS NEGATIVE (NOT MDD)
DEPRESSION ASSESS POSITIVE (MDD)
DEPRESSION SCREEN NEGATIVE
DEPRESSION SCREEN POSITIVE
DEPRESSION THERAPY
DEPRESSION TO BE MANAGED IN PC
PSYCHOTHERAPY
REFERRAL TO MENTAL HEALTH
REFUSED DEPRESSION ASSESSMENT
REFUSED DEPRESSION RX/INTERVENTION
NO DEPRESSIVE SX NEED INTERVENTION

VA-ANTIPSYCHOTIC MED SIDE EFF EVAL Terms

This national reminder contains reminder terms for the positive and negative evaluation for abnormal involuntary movements. If sites use a local health factor or exam or use the Simpson-Angus and record the results as a health factor, then those sites will need to map the findings to the terms and add appropriate entries to the dialog to match:

AIM EVALUATION NEGATIVE

AIM EVALUATION POSITIVE

The only findings in these reminder terms that are exported are the results of the AIMS from the Mental Health package.

The reminder term ANTIPSYCHOTIC MEDICATIONS contains a health factor for recording that the patient is on a depot antipsychotic that is being administered in clinic from ward stock. If the medication is not dispensed from the pharmacy, then no data is available to the reminder to determine that the patient is on an antipsychotic unless this health factor is used.

MH Term Mapping

If desired, add local Health Factors, orderables, or findings representing these terms.

Term	Mapping
ACUTE MEDICAL CONDITION	
AIM EVALUATION NEGATIVE	
AIM EVALUATION POSITIVE	
ANTIDEPRESSANT MEDICATIONS	
ANTIPSYCHOTIC DRUGS	
CHRONIC MEDICAL CONDITION	
DEPRESSION ASSESS COMPLETED IN MHC	
DEPRESSION ASSESS INCONCLUSIVE (? MDD)	
DEPRESSION ASSESS NEGATIVE (NOT MDD)	
DEPRESSION ASSESS POSITIVE (MDD)	
DEPRESSION DIAGNOSIS	
DEPRESSION SCREEN DONE RESULT UNKNOWN	
DEPRESSION SCREEN NEGATIVE	
DEPRESSION SCREEN POSITIVE	
DEPRESSION THERAPY	
DEPRESSION TO BE MANAGED IN PC	
NO DEPRESSIVE SX NEED INTERVENTION	
PSYCHOTHERAPY	
REFERRAL TO MENTAL HEALTH	
REFUSED AIM EVALUATION	
REFUSED ANTIPSYCHOTICS	
REFUSED DEPRESSION ASSESSMENT	
REFUSED DEPRESSION RX/INTERVENTION	
REFUSED DEPRESSION SCREENING	
SCHIZOPHRENIA DIAGNOSIS	

NOTE: It isn't necessary to enter an Effective Period when mapping terms, as this is already in the reminder definition. Enter an Effective Period only if you want to override the entry in the definition.

Example: Mapping a Local Health Factor Finding to the National Reminder Term

```
Select Reminder Term Management Option: TE Reminder Term Edit
Select Reminder Term: DEPRESSION ASSESS POSITIVE (MDD)
Select FINDING ITEM: HF.DEPRESSION 1+
Are you adding ' HF.DEPRESSION 1+ ' as a new FINDINGS (the 4th for this REMINDER
TERM)? No// Y (Yes)
EFFECTIVE PERIOD: <Enter>
USE INACTIVE PROBLEMS: N NO
WITHIN CATEGORY RANK: <Enter>
EFFECTIVE DATE: <Enter>
MH SCALE: <Enter>
CONDITION: <Enter>
CONDITION CASE SENSITIVE: <Enter>
RX TYPE: <Enter>
Select FINDING ITEM: <Enter>
Input your edit comments.
Edit? NO// <Enter>
Select Reminder Term: <Enter>
```

This is where you enter the local finding that will be mapped to the national term. Note that it must use a prefix (HF for Health Factor, OI for Orderable Item, etc.).

3. Run the Reminder Test option after term definition mapping is completed.
Review the results of patient data with each of the findings mapped to the term.
Option: Reminders Test on the Reminder Managers Menu

```
Select Reminder Managers Menu Option: RT Reminder Test
Select Patient: APPLESEED, JOHNNY 4-30-44 466680999 YES EMPLOYEE
Enrollment Priority: GROUP 5 Category: IN PROCESS End Date:
Select Reminder: VA-Depression Assessment
```

NOTE: See the Clinical Reminders Manager Manual for descriptions of the different elements of the test output.

4. Use the Reminder Dialog options to edit the national (exported) dialogs.

Once you have mapped the local findings to the national terms, you can then decide if you want to continue to use your local findings as the data elements that are captured, or if you want to use the national findings that are already mapped to the national terms.

If you want to continue to use your local findings, then be sure to edit the reminder dialog by identifying the element that allows for that data element to be collected. Change the finding item for that element to the local finding. The national reminders and dialogs can **only** be changed by changing the finding item in the nationally distributed elements to use your local finding item instead of the nationally distributed one.

Note that the AIMS reminder could be resolved in one of three ways: (1) by administering the AIMS, (2) by indicating that the patient was non-compliant with the prescribed medication, or (3) by indicating the patient refused the evaluation. Clinician narrative documentation of motor control is not sufficient.

NOTE: MH dialogs are exported as “disabled.” You must enable them, as follows, to use them (whether you use the dialogs as exported, or edit them):

Steps to add or edit dialog elements:

- a. Select Dialog management (DM) from the Reminders Manager Menu, then select Dialog (DI):

```
Select Reminder Managers Menu Option: DM  Reminder Dialog Management

DP      Dialog Parameters ...
DI      Reminder Dialogs

Select Reminder Dialog Management Option: DI  Reminder Dialogs
```

```

Ordering a Consult:

If your site wants to be able to order a consult from the "assessment" reminder, you need to create a quick order for the consult or a menu and put it in the finding item field indicated below:

10	Dialog element: HF DEP REFERRAL TO MHC Resolution: DONE AT ENCOUNTER Finding type: Finding item: <===== e.g. Q.ORZ GMENU MHC CONSULTS Additional Finding: REFERRAL TO MENTAL HEALTH [HF(612335)] Additional prompts: PXRM COMMENT
----	---

5. Verify that the reminders function properly.

- Run a Reminders Due Report to determine if the MH Clinical Reminder statuses reported are correct.

Option: Reminders Due on the Reminder Reports menu

This report can be displayed at the beginning of the day for patients being seen that day. Reminder reports offer a way to review how the mapping and the local data will potentially be viewed by the extracts that will be sent to the Austin database from the reminders.

- Each of the reminders can be used in a reminder report to evaluate clinics or stop codes on their adherence/compliance with that reminder.

- The reports can be run to list individual patient names for chart review on reasons that the guideline was not or could not be achieved.
- Clinics, stop codes, or divisions can be identified by summary reports using these reminders where there are differences in compliance or poor adherence to the guideline.

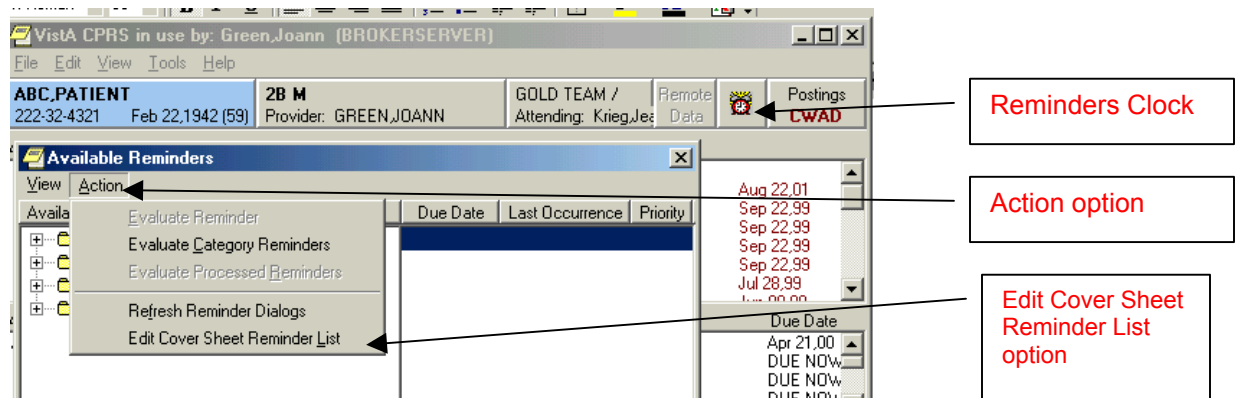

b. Use the Reminder Test option to test the reminders.

Option: Reminders Test on the Reminder Management menu

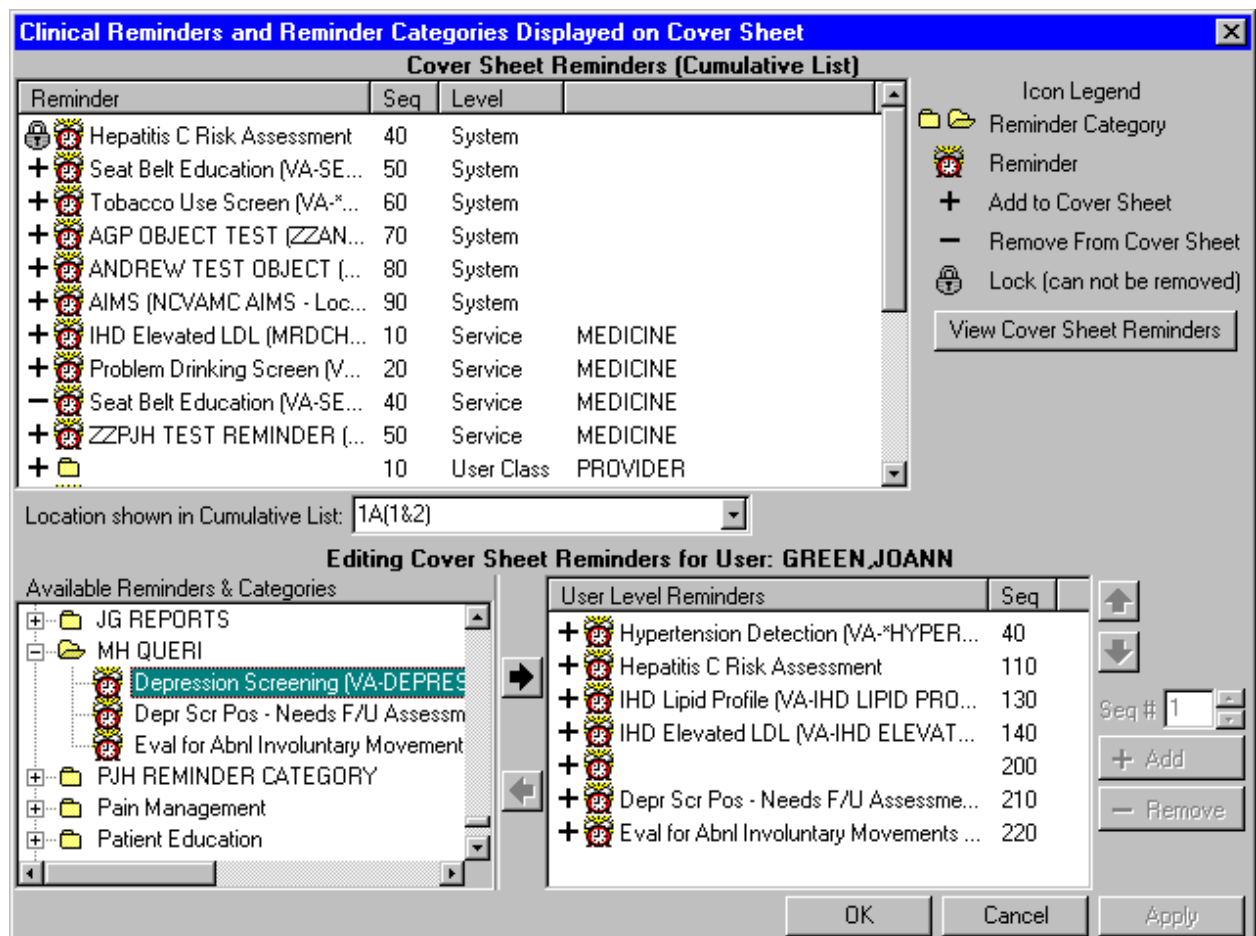

1. Select a patient who had depression screening done within the last year.
Run the Reminder Test option on the VA-Depression Assessment reminder definition. The status of the reminder should be "DONE."
Alternatively, use the clinical maintenance view in the CPRS GUI. The status of the reminder should be "DONE."
2. Select a patient who has a depression diagnosis and has not had depression screening done within the last year and who is not on therapy for depression or receiving psychotherapy.
Run the Reminder Test option on the VA-Depression Assessment reminder definition. The status of the reminder should be "DUE."
Alternatively, use the clinical maintenance view in the CPRS GUI. The status of the reminder should be "DUE."
3. Select a patient who has had a positive depression screen within the past year, but hasn't had a more recent negative depression screen.
Run the Reminder Test option on the VA-Depression Screening Pos - Followup reminder definition.
The status of the reminder should be "Applicable."
Use the clinical maintenance view in the CPRS GUI. The status of the reminder should be "Applicable."
4. Patient who has had a positive depression screen within the past year and has had a more recent negative depression screen.
Run the Reminder Test option on the VA-Depression Screening Pos - Followup reminder definition.
The status of the reminder should be "Not Applicable."
Use the clinical maintenance view in the CPRS GUI. The status of the reminder should be "Not Applicable."
5. Select a patient who has a schizophrenia diagnosis, who is on an antipsychotic and had an AIMS test done within the last year.
Run the Reminder Test option on the VA- Antipsychotic Med Side Eff Eval reminder definition. The status of the reminder should be "DONE."
Alternatively, use the clinical maintenance view in the CPRS GUI. The status of the reminder should be "DONE."

6. Add the nationally distributed reminders to the CPRS Cover Sheet

- a. Open a patient chart, click on the reminders clock, and when the available Reminders window opens, click on Action, and then select "Edit Cover Sheet Reminder List."

- b. When the Cover Sheet Reminder List opens, find the depression and AIMS reminders.

- c. Click on the Depression Screening (VA-DEPRESSION SCREENING) reminder and click the Add button (or double-click the reminder).
- d. Click on the Depr Scr Pos – Needs F/U Assessment (VA- POS DEPRESSION SCREEN FOLLOWUP) reminder and click the Add button (or double-click the reminder).
- e. Click on the Eval for Abnl Involuntary Movement (VA- ANTIPSYCHOTIC MED SIDE EFF EVAL) reminder and click the Add button (or double-click the reminder).

NOTE: Make sure that the AIMS reminder does not appear for clinicians who are not responsible for the management of antipsychotic-medication side-effects. This can be accomplished by using the CPRS cover sheet parameters to display the reminder only to those users who evaluate the patients for side-effects of antipsychotics.

7. Verify that the dialogs function properly

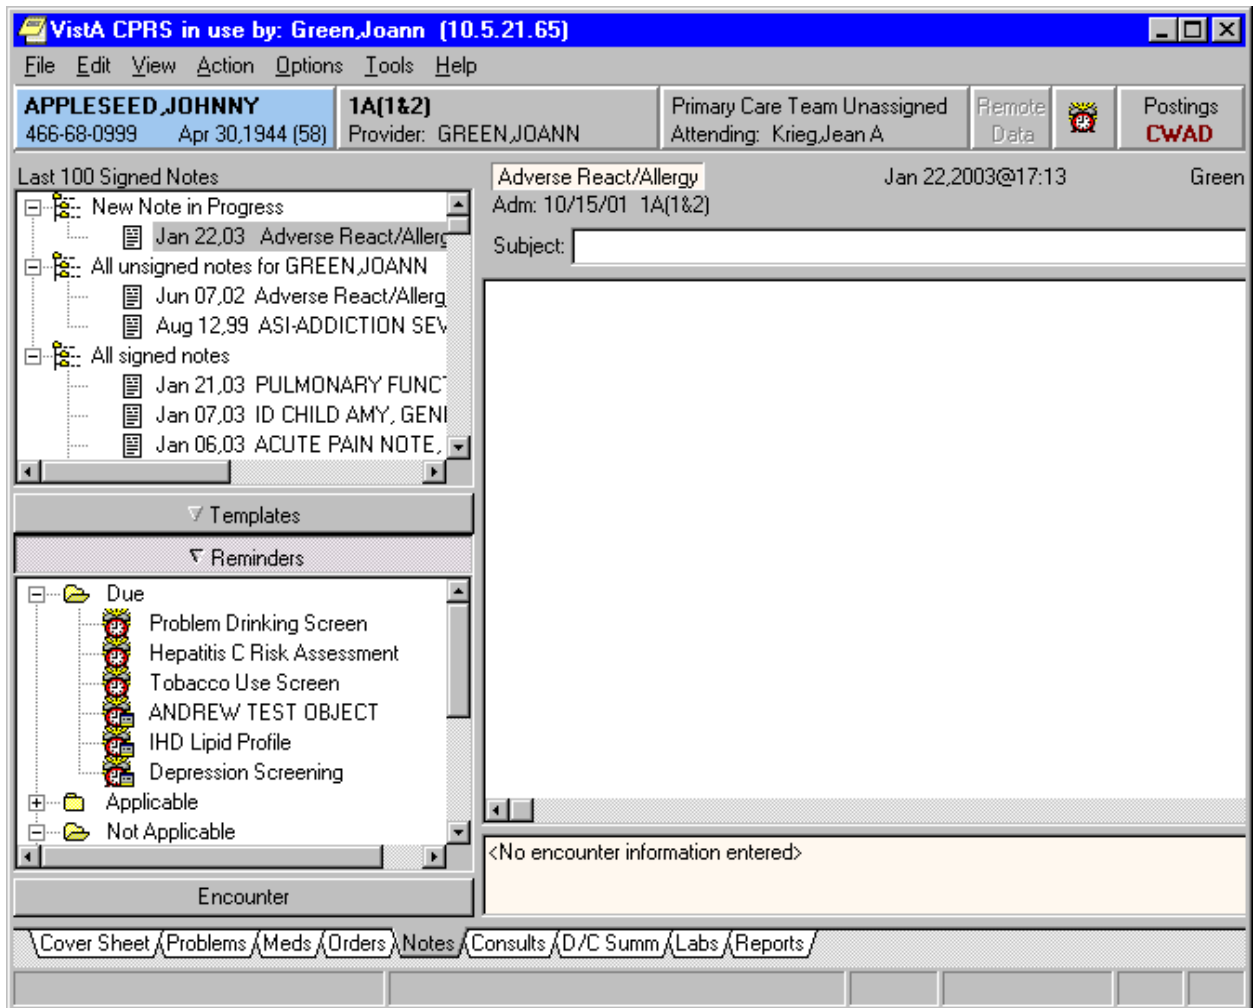

Test the MH Reminder dialogs in CPRS, using either the exported dialogs or your locally created dialogs. Using point-and-click reminder resolution processing through CPRS GUI, verify the following:

- Correct Progress Note text is posted
- Finding Item gets sent to PCE
- Reminder is satisfied

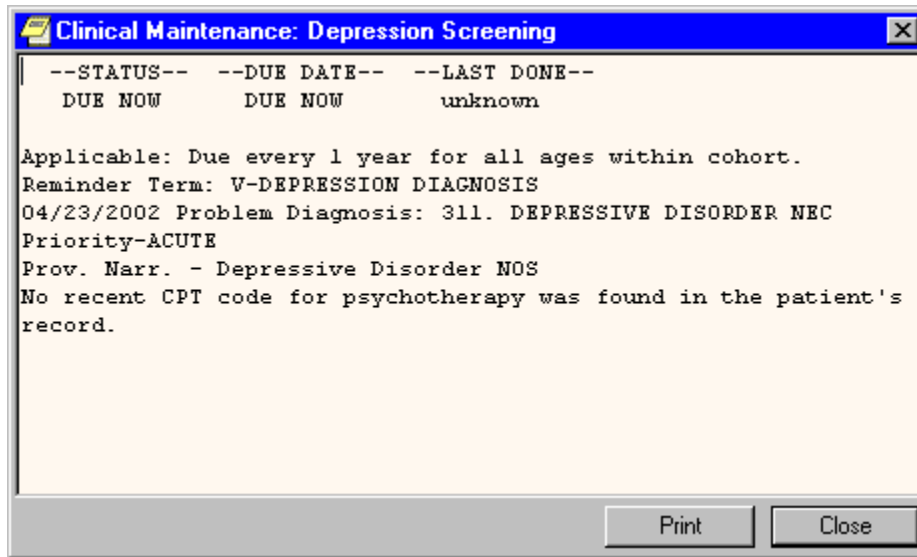

Check the Clinical Maintenance component display in CPRS after testing dialogs to ensure that all the activities are tested are reflected in the clinical maintenance display.

Steps to test dialogs:

1. On the cover sheet, click on the Reminders icon.
2. Click on reminders in the Reminders box to see details of a reminder
3. Open the Notes tab and select New Note. Enter a title.
4. Open the Reminders drawer and review the contents.

5. Locate the Depression Screening reminder dialog and open it.
6. In the dialog box, check relevant actions.
7. Finish the reminder processing.
8. Review the text added to the note to assure its correctness.
9. Ensure that the reminder can be satisfied by the individual finding items that were mapped to the reminder terms.
10. Check the Clinical Maintenance component display in Health Summaries and CPRS after the reminder dialog is complete.

11. Repeat steps 5-10 for the Depression Assessment and AIMS dialogs.

NOTE: Remember to “refresh” the screen after completing a dialog, if you want to see the updated status immediately. This is especially critical if you’re doing the screening reminder and want to see the follow-up reminder become due because of positive results.

8. (Optional) Add national health factors to Health Summaries and Encounter Forms

If you choose to begin to use the national health factors for data collection, be sure to add these national health factors to any health summaries and encounter forms where their display or use is appropriate.

Q & A – Helpful Hints

Q: Can we rename our Eval for Abnormal Invol Mvmt dialog to AIMS, to be more recognizable to providers – that is, change the PRINT NAME?

A: Yes (see example below).

Select Reminder Definition Management Option: **RE** Add/Edit Reminder Definition

Select Reminder Definition: **VA-A**

1 VA-ANTIPSYCHOTIC MED SIDE EFF EVAL LOCAL

2 VA-ALCOHOL USE SCREENING NEW PROPOSED ALCOHOL USE SCREEN
LOCAL

CHOOSE 1-2: **1** VA-ANTIPSYCHOTIC MED SIDE EFF EVAL LOCAL

Select one of the following:

A	All reminder details
G	General
B	Baseline Frequency
F	Findings
L	Logic
D	Reminder Dialog
W	Web Addresses

Select section to edit: **D** Reminder Dialog

Reminder Dialog

LINKED REMINDER DIALOG: VA-ANTIPSYCHOTIC MED SIDE EFF EVAL// **<Enter>**

Select one of the following:

A	All reminder details
G	General
B	Baseline Frequency
F	Findings
L	Logic
D	Reminder Dialog
W	Web Addresses

Select section to edit: **A** All reminder details

NAME: VA-ANTIPSYCHOTIC MED SIDE EFF EVAL Replace **<Enter>**

PRINT NAME: Eval for Abnl Involuntary Movements Replace **E...** With **AIMS**

Q: Our site uses a computed finding to link reminders to Progress Note titles. Can we add that to these reminders?

A: Yes

Q: What is a National Reminder?

A: National reminders are clinical reminders and reminder dialogs that have gone through an approval process for national distribution. Some national reminders are related to statutory, regulatory, or Central Office mandates such as Hepatitis C, MST, or Pain. Other national reminders are being developed under the guidance of the VA National Clinical Practice Guideline Council (NCPGC).

Guideline-related reminders are being developed for two reasons:

1. To provide reminders for sites that don't have reminders in place for a specific guideline (e.g., HTN, HIV).
2. To provide a basic set of reminders to all sites to improve clinical care, and also allow roll-up data for measurement of guideline implementation and adherence (e.g., IHD, Mental Health).

Q: Can national reminders or dialogs ever be locally modified?

A: The only way national reminders and dialogs can be modified is by changing the finding item in the nationally distributed dialog elements to use your local finding item instead of the nationally distributed one.

Q: How can we check parameters to see if anyone sees the reminder?

A: The simplest way to view whether an individual is seeing the depression reminders is to open the reminder cover sheet editor by clicking on the reminder clock in CPRS, picking the Action menu, and then choosing "Edit Cover Sheet Reminders." A button on the dialog allows you to view the entire list of reminders that are seen by an individual user.

From the listing above, you can determine "where" the reminder that a user sees actually comes from (System level, Division, Location, User, etc.). You should make a determination as to whether the reminder needs to be added at a specific level in order to be seen by the appropriate group of users.

Any clinicians who see primary care patients or who might need or want to follow or manage -- should see the depression reminder. In many centers, the nurses who manage or have the ability to enter policy orders should also see this reminder.

The depression Reminders should also be seen by these same clinicians and potentially by the nursing staff.

Q: I am trying to run a Reminders Due report for a "Selected Hospital Location" and keep getting the following message: "Location has no facility code." I've had my MAS ADPAC

check the profile for this clinic and he said it doesn't ask for that. I also had him check in the MAS file for that location and he said it's set up like all similar clinical locations.
Can you tell me what is the problem and how can I get this fixed.

A: This message is a result of the institution field in File 44 not being populated.
The message comes when the following call returns a null value:
S FACILITY=\$\$FACL^PXRMXAP(IEN)

```
^SC(301,0) = LOC NOFAC^BOO^C^^^^141^M^^^IN THE GRAVEYARD^^^^12^^N^1  
^SC(309,0) = JUDY EXAMS^^C^500^^108^0^^^^^^2^^N^^Y^^0^1
```

Notice 4th piece - 301 returns null in call above, 309 returns 500.

Q: What should we do if we already have depression reminders?

A: If you choose to continue using your local reminder and dialog, you need to make sure that your local health factors and lab tests are mapped appropriately to the national terms.

If you prefer to continue using your local reminder, you need to be absolutely sure that you are collecting all of the data that will eventually be transmitted to the Austin database.

In many cases, it may be safer to switch to using the national reminder or a copy of the national reminder in order to be sure that all of the possible resolutions are being collected locally. There is nothing wrong with abandoning some local health factors or reminders in favor of using the national dialogs and reminders or copies of them. Health factors that you elect to stop collecting in dialogs should be inactivated so that they are not inadvertently entered through PCE.

Other Local Reminder Issues

Modifications in term evaluation logic may change how some reminder terms work. This is only an issue if there are conditions within the term

- Previous logic: date of most recent finding in which the condition is true is passed to the reminder for evaluation
- New logic: Most recent finding in the term is used and then condition applied and results passed to the reminder for evaluation.

Implications of term logic changes:

- Terms that combine lab tests will always pass forward the most recent result
- Terms that combine dissimilar findings (immunizations, medications and orderable items) may not behave as they did before.

Term Logic Change Example

A term combining various ways to document influenza immunizations:

Finding Item: INFLUENZA ICD &CPT CODES FI(5)=TX(664003))
Finding Type: REMINDER TAXONOMY

Finding Item: INFLUENZA (FI(9)=IM(12))
Finding Type: IMMUNIZATION

Finding Item: INFLUENZA (FI(10)=DG(141))
Finding Type: VA GENERIC
Effective Period: 1Y
Finding Item: INFLUENZA INJ (FI(11)=OI(2892))
Finding Type: ORDERABLE ITEM
Condition: I V="complete"

1. An immunization administered in November 2001 and documented in the PCE immunization file.
2. An order placed (orderable item) for an immunization that was not completed.

Old Logic	New Logic
The more recent orderable item is incomplete and doesn't meet the condition.	The most recent finding is the orderable item
The reminder is satisfied by the "im" finding which is true	The orderable item does not meet the condition and the term reports a "false".
The reminder is satisfied	The reminder is due

Hints for Successful Term Mapping

1. Review any reminders related to depression that already exist on your system. You may have depression reminders for all patients, Mental Health patients, or patients with Depression.
2. List any health factors or data elements being collected in the local reminders.
3. Find any tests that represent an —currently in use or used in the past year.
4. Go through each reminder term listed in the reminder definitions and enter each of the local findings (health factors and lab tests) that match up with the reminder term.
5. Then, take your lists of local findings and make sure that each one is matched up to at least one reminder term.
6. Then, check each reminder term and make sure that there is at least one finding in each term that is being used in a dialog.

VA-DEPRESSION SCREENING

REMINDER DEFINITION INQUIRY		Feb 02, 2003 8:23:46 am Page 1	

VA-DEPRESSION SCREENING	No.	135	

Print Name:	Depression Screening		
Class:	NATIONAL		
Sponsor:	JOHN D DEMAKIS		
Review Date:			
Usage:	CPRS, REPORTS		
Related VA-* Reminder:			
Reminder Dialog:	VA-DEPRESSION SCREEN		
Priority:			
Reminder Description:			
Screening for Depression using a standard tool should be done on a yearly basis.			
The yearly screening is satisfied by entry of a health factor indicating positive or negative results for the 2 question MacArthur screening tool or by entry of negative or positive results of any of the following in the MH package:			
Negative		Positive	
DOM80=0		DOM80=1	
DOMG<4		DOMG>3	
CRS<10		CRS>9	
BDI<10		BDI>9	
Zung<33		Zung>32	
The reminder is also resolved by entry of information indicating that the patient is already being treated/evaluated in a Mental Health clinic as indicated by entry of a health factor of:			
CURRENT F/U OR RX FOR DEPRESSION.			
This health factor is in the reminder term: DEPRESSION THERAPY.			
Patients are automatically excluded from the cohort if they have a recent diagnosis of depression (ICD code in the past 1 year) and have either a CPT code for psychotherapy in the past 3 months or are on antidepressant medication (current supply of medication in the past 3 months).			
Sites that use a different screening tool than the 2 question MacArthur screening tool will need to create local health factors to indicate a positive or negative result and will need to map those local health factors to the national terms:			
DEPRESSION SCREEN NEGATIVE			
DEPRESSION SCREEN POSITIVE			
Reminder terms are included in this reminder to indicate if patients cannot be screened due to an acute or chronic medical condition.			
ACUTE MEDICAL CONDITION			
CHRONIC MEDICAL CONDITION			

The health factors for these terms are:

UNABLE TO SCREEN-ACUTE MED CONDITION (resolves the reminder for 3M)
UNABLE TO SCREEN-CHRONIC MED CONDITION (resolves the reminder for 1Y).

The reminder term DEPRESSION SCREEN DONE RESULT UNKNOWN is included for sites where a health factor or exam was being collected to indicate that depression screening was being done using an appropriate tool but the result (positive or negative) was not being recorded. This term is included ONLY to allow sites to make the conversion to collecting positive and negative screens - any health factors or exams that a site maps to this term should NOT be included for use on any dialog or on an encounter form and should not be used in the future.

VA- POS DEPRESSION SCREEN FOLLOWUP

REMINDER DEFINITION INQUIRY Feb 02, 2003 8:24:47 am Page 1

VA-POS DEPRESSION SCREEN FOLLOWUP No. 179

Print Name: Depr Scr Pos - Needs F/U Assessment

Class: NATIONAL

Sponsor: JOHN D DEMAKIS

Review Date:

Usage: CPRS, REPORTS

Related VA-* Reminder:

Reminder Dialog: VA-DEPRESSION ASSESSMENT

Priority:

Reminder Description:

The following reminder terms are included in this reminder.

ANTIDEPRESSANT MEDICATIONS
DEPRESSION DIAGNOSIS
DEPRESSION ASSESS COMPLETED IN MHC
DEPRESSION ASSESS INCONCLUSIVE (? MDD)
DEPRESSION ASSESS NEGATIVE (NOT MDD)
DEPRESSION ASSESS POSITIVE (MDD)
DEPRESSION SCREEN NEGATIVE
DEPRESSION SCREEN POSITIVE
DEPRESSION THERAPY
DEPRESSION TO BE MANAGED IN PC
PSYCHOTHERAPY
REFERRAL TO MENTAL HEALTH
REFUSED DEPRESSION ASSESSMENT
REFUSED DEPRESSION RX/INTERVENTION
NO DEPRESSIVE SX NEED INTERVENTION

The reminder is applicable if the patient has positive depression screen in the past 1 year (DEPRESSION SCREEN POSITIVE). If a more recent negative depression screen is entered, then the reminder becomes not applicable (DEPRESSION SCREEN NEGATIVE).

The reminder is resolved by DEPRESSION ASSESS COMPLETED IN MHC, which includes the entry of a BDI, CRS or ZUNG depression scale in the mental health package or by psychotherapy in the past 3 months.

If the patient has a recent diagnosis of depression and is on medication for depression, the reminder is resolved.

If the patient refuses additional assessment of the positive depression screen or refuses recommended therapy for depression, the reminder is resolved for 3 months (REFUSED DEPRESSION ASSESSMENT)

A refusal after the assessment is completed resolves the reminder for a year. (Entry of REFUSED DEPRESSION RX/INTERVENTION can only be done in conjunction with a positive, negative or inconclusive assessment - each of which resolves the reminder for one year).

If an entry is made to indicate that the patient is already being treated for depression, the reminder is resolved. DEPRESSION THERAPY

The reminder is also resolved if it is indicated that the depression will be managed in PC. (DEPRESSION TO BE MANAGED IN PC)

The reminder is resolved for 3 months by a referral to Mental Health

(REFERRAL TO MENTAL HEALTH) or by the presence of a recent code for psychotherapy (PSYCHOTHERAPY). But if the entry of the referral is made in conjunction with the negative, positive, or inconclusive assessment then the reminder is resolved for one year.

Assessment of the patient based on DSM-IV criteria will resolve the reminder for one year:

DEPRESSION ASSESS NEGATIVE (NOT MDD)
DEPRESSION ASSESS POSITIVE (MDD)
DEPRESSION ASSESS INCONCLUSIVE

The reminder is resolved by entry of NO DEPRESSIVE SX NEED INTERVENTION which is entered in conjunction with a negative assessment.

ANTIPSYCHOTIC MED SIDE EFF EVAL Reminder

The AIMS reminder has been designed to be due on all patients who are on any one of the antipsychotics (excluding ones like compazine). The taxonomy for Schizophrenia is included in the reminder, but will not be part of the cohort logic. By leaving the taxonomy in the reminder, data roll-up can use the Report Extracts functionality in version 2, either with or without information on patients with Schizophrenia.

Instructions are provided in Appendix E about how to copy this reminder and modify the copy to allow a site to create a second reminder for reporting of patients with Schizophrenia who are on an antipsychotic (reporting numbers that match the performance measure).

REMINDER DEFINITION INQUIRY	Feb 02, 2003 8:24:29 am Page 1

VA-ANTIPSYCHOTIC MED SIDE EFF EVAL No. 177	

Print Name:	Eval for Abnl Involuntary Movements
Class:	NATIONAL
Sponsor:	JOHN D DEMAKIS
Review Date:	
Usage:	CPRS, REPORTS
Related VA-* Reminder:	
Reminder Dialog:	VA-AIMS
Priority:	
Reminder Description:	
<p>Prolonged use of antipsychotic medications can result in abnormal involuntary movement disorders, which can be managed by changing medications, altering the dose of a medication, or prescribing medications to control the movement disorder symptoms. Thus, the Psychoses Clinical Practice Guideline recommends an evaluation of movement disorder symptoms annually for patients on antipsychotic medications using either the Abnormal Involuntary Movement Scale (AIMS) or the Simpson-Angus. The proposed reminder would prompt clinicians to complete an evaluation of movement disorders once a year on patients taking antipsychotic medications. The biggest challenge in defining this reminder is the identification of the cohort of patients to whom it is applicable. The pharmacy database structure does not make it easy to identify patients who have been on antipsychotics for a prolonged period of time. Even if it did, there are some patients who have not received antipsychotics from VHA for an extended period but who have been receiving these medications for a long time from non-VHA sources or who are receiving depot neuroleptics from ward stock (not recorded in the pharmacy files.). If the cohort were defined simply as any patients currently on an antipsychotic, it would be applicable to patients who have been on an antipsychotic for a very brief period of time. The solution to the cohort problem taken by the proposed reminder is to limit the applicability of the reminder to patients on specific antipsychotic drug classes which do not include those medications commonly used as antiemetics.</p> <p>Sites should ensure that the AIMS reminder does not appear for clinicians who are not responsible for the management of antipsychotic medication side effects. This can be accomplished by using the CPRS cover sheet parameters to display the reminder only to those users who evaluate the patients for side effects of antipsychotics.</p>	

The proposed reminder could be resolved in one of three ways: (1) by administering the AIMS, (2) by indicating that the patient was non-compliant with the prescribed medication, or (3) by indicating the patient refused the evaluation. Clinician narrative documentation of motor control is not sufficient.

This national reminder contains reminder terms for the positive and negative evaluation for abnormal involuntary movements. If sites use a local health factor or exam or use the Simpson-Angus and record the results as a health factor, then those sites will need to map the findings to the terms and add appropriate entries to the dialog to match:

AIM EVALUATION NEGATIVE
AIM EVALUATION POSITIVE

The only findings in these reminder terms that are exported are the results of the AIMS from the Mental Health package.

The reminder term ANTIPSYCHOTIC MEDICATIONS contains the drug classes CN701 and CN709. In addition, a health factor is included in this term for use in recording that the patient is on a depot antipsychotic that is being administered in clinic from ward stock. If the medication is not dispensed from the pharmacy, then no data is available to the reminder to determine that the patient is on an antipsychotic unless this health factor is used. This health factor for depot neuroleptics can be placed on an encounter form or into a reminder dialog for injections.

Technical Description:

The reminder terms for this reminder are:

AIM EVALUATION NEGATIVE
Includes AIMS<=6 as indicated by a score in the MH package.

AIM EVALUATION POSITIVE
Includes AIMS>=7 as indicated by a score in the MH package.

ANTIPSYCHOTIC DRUGS
Includes a health factor for administration of depot neuroleptics from ward stock and the drug classes CN701 AND CN709.

REFUSED AIM EVALUATION
Includes a health factor for refusal of evaluation. Used in resolution logic to resolve the reminder for 3 months.

REFUSED ANTIPSYCHOTICS
Includes health factor for refusal to take medications. This finding excludes the patient from the cohort for 1 month.

SCHIZOPHRENIA DIAGNOSIS
This term includes the taxonomy for schizophrenia (295.00 - 295.95).

The reminder is due if the patient is on medication (RT:ANTIPSYCHOTIC DRUGS). The finding for the reminder term for the drugs has an effective period of 30 days. (This means that the reminder will show as due for the time period that the patient has an active supply of drug based on last release date plus the days' supply and for an additional 30 days.) The health factor of DEPOT NEUROLEPTIC has an effective period of 60 days.

ASSESSMENT OF A POSITIVE SCREEN FOR DEPRESSION

Patients with a positive depression screen should be assessed for Major Depressive Disorder based on DSM-IV criteria and should be assessed for the need for therapy, intervention and/or referral.

1. Assess if patient is at high risk (marked psychotic symptoms, suicidality, potential for violence, delirium)
2. Further questions regarding current signs & symptoms of depression
3. Obtain careful psychiatric history of past depressive episodes
4. Attention to 'red flags'.

Review history for substance abuse, other illness as a cause of depression, medication as a cause of depression and for the severity of the depression. Patients who may fit the DSM-IV criteria for Major Depressive Disorder should be considered for referral to a mental health professional for evaluation and management.

Major Depressive Episode (abstracted from DSM-IV, page 327)

a. At least five of the following symptoms have been present during the same 2-week period, nearly every day, and represent a change from previous functioning. At least one of the symptoms must be either (1) depressed mood or (2) loss of interest or pleasure:

- (1) depressed mood most of the day, nearly every day, as indicated by self or others.
- (2) markedly diminished interest or pleasure in all, or almost all, activities.
- (3) significant weight loss or weight gain (5%/mo.) or loss/gain in appetite nearly every day.
- (4) insomnia or hypersomnia nearly every day.
- (5) psychomotor agitation or retardation nearly every day (as noted by others*).
- (6) fatigue or loss of energy nearly every day.
- (7) feelings of worthlessness or excessive or inappropriate guilt nearly every day.
- (8) diminished ability to think or concentrate or indecisiveness nearly every day.
- (9) recurrent thoughts of death, recurrent suicidal ideation without a specific plan, or a suicide attempt or a specific plan for committing suicide.

☐ Click here to view the DSM-IV criteria for Major Depressive Disorder (MDD)
☒ Click here to view the PHQ-9 Assessment Tool for Depression

Ask the patient: Over the past 2 weeks, how often have you been bothered by any of the following problems?

Not at all(1) Several days(2) More than half the days(3) Nearly every day(4)

1. Little interest or pleasure in doing things
2. Feeling down, depressed, or hopeless
3. Trouble falling or staying asleep, or sleeping too much
4. Feeling tired or having little energy
5. Poor appetite or overeating
6. Feeling bad about yourself-or that you are a failure or have let yourself or your family down
7. Trouble concentrating on things, such as reading the newspaper or watching television
8. Moving or speaking so slowly that other people could have noticed. Or the opposite-being so fidgety or restless that you have been moving around a lot more than usual
9. Thoughts that you would be better off dead or of hurting yourself in some way

For questions 1-8, count the number of symptoms that the patient checked as "more than half the days" or "nearly every day" (3 or 4).

For question 9, count the question as positive if the patient checks "Several days", "More than half the days" or "Nearly every day".

Then, if patient has:

0-2 PHQ symptoms - they are not clinically depressed
 3-4 PHQ symptoms - they have an other depressive syndrome but NOT MDD
 5 or more PHQ symptoms - suggestive of MDD.

See DSM-IV criteria for other diagnostic considerations.

Description: Screening for depression may not be possible in patients

with some chronic medical conditions. This term represents any data element that is used to indicate that the patient has an chronic medical condition that prevents screening for depression. E.g. severe dementia.

Findings: UNABLE TO SCREEN-CHRONIC MED CONDITION (FI(1)=HF(612338))

DEPRESSION SCREEN DONE RESULT UNKNOWN

Class: LOCAL

Date Created:

Sponsor:

Review Date:

Description: This term is for mapping of old local findings which indicate that depression screening was done with an appropriate tool but no data was recorded to indicate whether it was positive or negative. This term is included ONLY to allow sites to make the conversion to collecting positive and negative screens - any health factors or exams that a site maps to this term should NOT be included for use on any dialog or on an encounter form.

Appendix F: How to modify AIMS reminders to allow reporting of patients with schizophrenia who are on antipsychotics

This appendix describes how to copy the exported AIMS reminder and modify the copy to allow you to run reports on patients with schizophrenia who are on antipsychotics. (This will give you reporting numbers that match the performance measure).

1. Review the AIMS reminder definition.

Option: Reminders Definition Management on the Reminder Managers Menu

AIMS Reminder

REMINDER DEFINITION INQUIRY	Feb 02, 2003 8:24:29 am Page 1

VA-ANTIPSYCHOTIC MED SIDE EFF EVAL No. 177	

Print Name:	Eval for Abnl Involuntary Movements
Class:	NATIONAL
Sponsor:	JOHN D DEMAKIS
Review Date:	
Usage:	CPRS, REPORTS
Related VA-* Reminder:	
Reminder Dialog:	VA-AIMS
Priority:	
Reminder Description:	
<p>Prolonged use of antipsychotic medications can result in abnormal involuntary movement disorders, which can be managed by changing medications, altering the dose of a medication, or prescribing medications to control the movement disorder symptoms. Thus, the Psychoses Clinical Practice Guideline recommends an evaluation of movement disorder symptoms annually for patients on antipsychotic medications using either the Abnormal Involuntary Movement Scale (AIMS) or the Simpson-Angus. The proposed reminder would prompt clinicians to complete an evaluation of movement disorders once a year on patients taking antipsychotic medications. The biggest challenge in defining this reminder is the identification of the cohort of patients to whom it is applicable. The pharmacy database structure does not make it easy to identify patients who have been on antipsychotics for a prolonged period of time. Even if it did, there are some patients who have not received antipsychotics from VHA for an extended period but who have been receiving these medications for a long time from non-VHA sources or who are receiving depot neuroleptics from ward stock (not recorded in the pharmacy files.). If the cohort were defined simply as any patients currently on an antipsychotic, it would be applicable to patients who have been on an antipsychotic for a very brief period of time. The solution to the cohort problem taken by the proposed reminder is to limit the applicability of the reminder to patients on specific antipsychotic drug classes which do not include those medications commonly used as antiemetics.</p> <p>Sites should ensure that the AIMS reminder does not appear for clinicians who are not responsible for the management of antipsychotic medication side effects. This can be accomplished by using the CPRS cover sheet parameters to display the reminder only to those users who evaluate the patients for side effects of antipsychotics.</p>	

The proposed reminder could be resolved in one of three ways: (1) by administering the AIMS, (2) by indicating that the patient was non-compliant with the prescribed medication, or (3) by indicating the patient refused the evaluation. Clinician narrative documentation of motor control is not sufficient.

This national reminder contains reminder terms for the positive and negative evaluation for abnormal involuntary movements. If sites use a local health factor or exam or use the Simpson-Angus and record the results as a health factor, then those sites will need to map the findings to the terms and add appropriate entries to the dialog to match:

AIM EVALUATION NEGATIVE
AIM EVALUATION POSITIVE

The only findings in these reminder terms that are exported are the results of the AIMS from the Mental Health package.

The reminder term ANTIPSYCHOTIC MEDICATIONS contains the drug classes CN701 and CN709. In addition, a health factor is included in this term for use in recording that the patient is on a depot antipsychotic that is being administered in clinic from ward stock. If the medication is not dispensed from the pharmacy, then no data is available to the reminder to determine that the patient is on an antipsychotic unless this health factor is used. This health factor for depot neuroleptics can be placed on an encounter form or into a reminder dialog for injections.

Technical Description:

The reminder terms for this reminder are:

AIM EVALUATION NEGATIVE
Includes AIMS<=6 as indicated by a score in the MH package.

AIM EVALUATION POSITIVE
Includes AIMS>=7 as indicated by a score in the MH package.

ANTIPSYCHOTIC DRUGS
Includes a health factor for administration of depot neuroleptics from ward stock and the drug classes CN701 AND CN709.

REFUSED AIM EVALUATION
Includes a health factor for refusal of evaluation. Used in resolution logic to resolve the reminder for 3 months.

REFUSED ANTIPSYCHOTICS
Includes health factor for refusal to take medications. This finding excludes the patient from the cohort for 1 month.

SCHIZOPHRENIA DIAGNOSIS
This term includes the taxonomy for schizophrenia (295.00 - 295.95).

The reminder is due if the patient is on medication (RT:ANTIPSYCHOTIC DRUGS). The finding for the reminder term for the drugs has an effective period of 30 days. (This means that the reminder will show as due for the time period that the patient has an active supply of drug based on last release date plus the days' supply and for an additional 30 days.) The health factor of DEPOT NEUROLEPTIC has an effective period of 60 days.

2. Copy and edit the exported definition to a locally named definition

Option: Copy Reminders Definition on the Reminder Management Menu

- a. Copy the reminder definition VA-ANTIPSYCHOTIC MED SIDE EFF EVAL to a local reminder definition – for example, AIMS - SCHIZOPHRENIA AND ANTIPSYCHOTICS, and then edit the reminder.
- b. Change the Reminder definition description text to reflect the changes.
- c. If the new reminder is to be used only for reporting purposes, then enter an ‘R’ in the Usage field.

```
Select Reminder Definition Management Option: rc Copy Reminder Definition

Select the reminder item to copy: VA-ANTIPSYCHOTIC MED SIDE EFF EVAL LOCAL
PLEASE ENTER A UNIQUE NAME: AIMS - SCHIZOPHRENIA AND ANTIPSYCHOTICS

The original reminder ANTIPSYCHOTIC MED SIDE EFF EVAL has been copied into AIMS -

REMINDER DESCRIPTION:. . .
. . .
The only findings in these reminder terms that are exported are the
results of the AIMS from the Mental Health package.

The reminder term ANTIPSYCHOTIC MEDICATIONS contains a health factor
for recording that the patient is on a depot antipsychotic that is being
administered in clinic from ward stock. If the medication is not
dispensed from the pharmacy, then no data is available to the reminder to
determine that the patient is on an antipsychotic unless this health
factor is used.

Edit? NO// YES
```

3. a. Open the finding for the diagnosis of schizophrenia (reminder term) and add an “AND” to the Use in Cohort logic field.

b. Change the time limit in the Effective Period field to indicate how far back to look for a diagnosis of schizophrenia.

```
Finding Item: SCHIZOPHRENIA DIAGNOSIS (FI(1)=RT(111))
Finding Type: REMINDER TERM
Found Text: The patient has a diagnosis of schizophrenia.
Use in Patient Cohort Logic: AND
Effective Period: 2Y
```

4. Run the Reminder Test option after term definition mapping is completed. Review the results of patient data with each of the findings mapped to the term.

Option: Reminders Test on the Reminder Managers Menu

5. Verify that the reminder functions properly

a. Run a Reminders Due Report to determine if the DEPRESSION Clinical Reminder statuses reported are correct. This report can be displayed at the beginning of the day for patients being seen that day.

b. Use the Reminder Test option to test the reminders.

6. If the new reminder is to be used in CPRS, verify that the dialog functions properly

Exercise point-and-click reminder resolution processing through CPRS GUI. Check that each element posts the correct progress note text, finding item to PCE, and also satisfies the reminder.

NOTE:: Remember that if you create the reminder as indicated above, it will be due for patients with schizophrenia and on antipsychotics. The national reminder will be due on all patients on antipsychotics. If you display both reminders to clinicians, then they will see two reminders for the same intervention on patients with schizophrenia and on antipsychotics.

This is not recommended.

Appendix G: How to Combine the Assessment and the Screening Reminder Dialogs

Some sites have expressed an interest in having the POSITIVE DEPRESSION screen checkbox open up when checked off, to allow the user to go ahead and do the assessment of the positive screen at the same time that the depression screen is being recorded.

The advantage of this is that a qualified provider can do the screening and the assessment of a positive screen in one reminder dialog.

The disadvantage is that if the site is not careful, those users who do the depression screening but who are not qualified to perform the assessment could be tempted to click off items from the list.

Step 1: Review the items from the Depression Assessment dialog that you want to include in the Depression Screening dialog under the option of POSITIVE DEPRESSION SCREEN.

```
REMINDER DIALOG NAME: DEPRESSION ASSESSMENT
-Sequence-----Dialog Details-----
  5           Dialog element: TEXT DEPRESSION EVAL INSTRUCTIONS

  7           Dialog element: TEXT BLANK LINE WITH TEMPLATE FIELD

ASSESSMENT OF A POSITIVE SCREEN FOR DEPRESSION - PROVIDERS ONLY !

Patients with a positive depression screen should be assessed for Major Depressive Disorder based on DSM-IV criteria and should be assessed for the need for therapy, intervention and/or referral.

1. Assess if patient is at high risk (marked psychotic symptoms, suicidality, potential for violence, delirium)
2. Further questions regarding current signs & symptoms of depression

3. Obtain careful psychiatric history of past depressive episodes

4. Attention to 'red flags'.

Review history for substance abuse, other illness as a cause of depression, medication as a cause of depression and for the severity of the depression. Patients who may fit the DSM-IV criteria for Major Depressive Disorder should be considered for referral to a mental health professional for evaluation and management.

CLINICAL REMINDER ACTIVITY

Depression Screening:
The 2 question depression screen was performed and the patient's depression screen is positive.

Health Factors: **DEPRESSION SCREEN (2 Q) POSITIVE**

* Indicates a Required Field

Appendix H: Creating and Using Computed Findings

When none of the standard finding types will work, sites can create a computed finding. A computed finding is an M routine that takes a standard set of arguments. The computed finding must be entered into the REMINDER COMPUTED FINDING file #811.4 before it can be used as a finding in a reminder definition.

NOTE: Only programmers who have "@" access can actually write the routine and enter it into the REMINDER COMPUTED FINDINGS file. Once it is in the file, Reminders Managers can use the computed finding in reminder definitions.

A number of computed findings are distributed by the Clinical Reminders package. All of them were written to be used with the CONDITION field. This will allow you to create findings that are very specific. For example, using the BMI computed finding you can create a finding this is true only for patients with a BMI that is greater than or equal to 25. You can use these as examples as you start to create your own computed findings.

Steps to Create a Computed finding

1. Write an M routine.

The routine takes the following arguments: (DFN, TEST, DATE, VALUE, TEXT). DFN is the patient id and will be set when the computed finding routine is called. The following variables should be set by the computed finding routine.

- TEST is the logical value of the FINDING. Set to 1 for true and 0 for false.
- DATE is the date of the finding in FileMan format. Set it to null if the finding is false.
- VALUE is a value for the finding to be used by the CONDITION field. Setting this is optional.
- TEXT is text to be displayed in the Clinical Maintenance output. Setting this is optional.

Whenever you create a computed finding, make sure that you “new” all the variables you use, to avoid strange side effects.

Computed Findings, cont'd

2. Enter your computed finding into the Reminders package.

Use the option Reminder Computed Finding Edit (CFE) on the Computed Findings menu to enter/register your computed finding, which makes an entry in the REMINDER COMPUTED FINDINGS file (#811.4).

File #811.4 contains a combination of nationally distributed and local entries. Nationally distributed entry names are prefixed with VA-. Local entry names can't start with VA-.

Complete each of these four fields:

NAME (.01 field) - this is the name of the computed finding. When a computed finding is added as a finding to a reminder definition, it is done using NAME. For example, type CF.VA-BMI to add the exported VA-BMI computed finding to your reminder definition.

ROUTINE (.02 field) - this is the name of the MUMPS routine.

ENTRY POINT (.03 field) - this is the entry point in the MUMPS routine (the line tag at which that finding begins).

PRINT NAME (.04 field) - this will be displayed on the Clinical Maintenance component as the name of the computed finding. If it is blank, NAME will be used.

Example

```
Select Reminder Computed Finding Management Option: cfe Reminder Computed
Finding Edit

Select Reminder Computed Finding: AJEY TEST COMPUTED FINDING
...OK? Yes// <Enter> (Yes)

NAME: AJEY TEST COMPUTED FINDING Replace <Enter>
ROUTINE: AJEYRM01
ENTRY POINT: TEST
PRINT NAME: Test Computed Finding

DESCRIPTION:
  1>
CLASS: LOCAL//
SPONSOR:
REVIEW DATE:
```

3. Placing the finding into your reminder

Now that the finding is created and entered/registered, you may use it just like any other finding would be used. The prefix for adding it to the list of findings is CF. and you can choose whether it belongs to the patient cohort logic or the resolution logic. Simply keep in mind what it means to have your finding TRUE or FALSE. Here is an example of using the GMRA finding to identify patients that have no allergy assessment data on their electronic chart. This method uses the scenario that it is DUE for all patients (no specific cohort logic), and RESOLVED by a TRUE computed finding (patient *has* data in ART package).

The (short) version of setting it up is captured here.

```
Select FINDING: CF.AJEY ALLERGY ASSESSMENT
Searching for a REMINDER COMPUTED FINDING, (pointed-to by FINDING ITEM)
    AJEY ALLERGY ASSESSMENT
    ...OK? Yes// (Yes)

FINDING ITEM: AJEY ALLERGY ASSESSMENT//
USE IN RESOLUTION LOGIC: AND//
USE IN PATIENT COHORT LOGIC:
FOUND TEXT:
There is allergy assessment data on file in the ART package of VistA for
this patient.
NOT FOUND TEXT:
There is no allergy assessment on file in the ART package of VistA for
this patient.
```
